APPLICATION NUMBER : 53120959

APPLICANT : KUROMATSU TOKUMITSU;

INVENTOR : KUROMATSU TOKUMITSU;

INT.CL. : B01F 5/00

TITLE : ELEMENT FOR TWO-FLUID MIXER

ABSTRACT : PURPOSE: A mixing element by which the use of rotating vanes can be eliminated and also good mixing effect can be obtained at lower cost.

CONSTITUTION: Heavy oil and kerosene supplied into the mixer B by the pumps 4 and 7 are mixed gradually by a frequent, repetitive combination and separation cycle at a number of intersections in the first and second paths 2 in each laminate A. During the period, the flow direction of mixed fluid at the end portion of the first and second paths 2 is changed by 90° owing to the inclination of 45° of the paths against the axis O and also mixed fluid from the first path or the second path is separately flowed into the plural paths 2 at the time when it moves from one laminate A to next laminate A, while the mixed fluids from the plural paths 2 are combined at the one path, thus promoting the mixing action of fluids.
